

(a)

(b)

(c)

**Fig. 6.51** Results at various stages in the perspective-projection viewing pipeline. A top and off-axis parallel projection are shown in each case. (a) The original viewing situation. (b) The VRP has been translated to the origin. (c) The  $(u, v, n)$  coordinate system has been rotated to be aligned with the  $(x, y, z)$  system. (d) The center of projection (COP) has been translated to the origin. (e) The view volume has been sheared, so the direction of projection (DOP) is parallel to the  $z$  axis. (f) The view volume

has been scaled into the canonical perspective-projection view volume. The viewing parameters are  $VRP = (1.0, 1.275, 2.6)$ ,  $VPN = (1.0, 0.253, 1.0)$ ,  $VUP = (0.414, 1.0, 0.253)$ ,  $PRP = (1.6, 0.0, 1.075)$ ,  $Window = (-1.325, 2.25, -0.575, 0.575)$ ,  $F = 0$ ,  $B = -1.2$ . (Figures made with program written by Mr. L. Lu, The George Washington University.)

**Fig. 6.47** Results at various stages in the parallel-projection viewing pipeline. A top and off-axis parallel projection are shown in each case. (a) The original viewing situation. (b) The VRP has been translated to the origin. (c) The  $(u, v, n)$  coordinate system has been rotated to be aligned with the  $(x, y, z)$  system. (d) The view volume has been sheared such that the direction of projection (DOP) is parallel to the  $z$  axis. (e) The view volume has been translated and scaled into the canonical parallel-projection view volume. The viewing parameters are  $VRP = (0.325, 0.8, 4.15)$ ,  $VPN = (.227, .267, 1.0)$ ,  $VUP = (.293, 1.0, .227)$ ,  $PRP = (0.6, 0.0, -1.0)$ ,  $Window = (-1.425, 1.0, -1.0, 1.0)$ ,  $F = 0.0$ ,  $B = -1.75$ . (Figures made with program written by Mr. L. Lu, The George Washington University.)
